

# Brady Scaggari

I am a Senior undergraduate seeking an internship. I am especially interested in Machine Learning, Data Science, Cyber Security and Software Development. I am looking to expand my problem-solving skills whilst finding a specialty I enjoy.

## Technologies, Languages, Coursework

---

- Languages: Java, C, C++, JavaScript, Python, Rust, SQL, HTML, Perl, MATLAB
- Technologies: Git, MATLAB, Linux, Node.js, Jupyter Notebook, Docker, MongoDB, MySQL, Django, Microsoft Office,
- CS Coursework: Data structures and Algorithms, Object Oriented Programming, Compilers, Web Development, Software Development, Operating Systems, Database Management, Machine Learning
- Math Coursework: Calculus, Linear Algebra, Numerical Analysis, Discrete Mathematics, Engineering Statistics, Applied Linear Algebra, Relational Algebra

## Education

---

- **BS Computer Science, NMSU (New Mexico State University)**
  - **Cumulative GPA: 3.6**
  - **Major GPA: 3.4**
  - **Minor: Mathematics GPA: 3.4**
- Spring 2025**

## Work Experience

### Server

Garduno's of Mexico, Albuquerque, NM (May 2023, August 2023)

- Managed up to eight tables at once on any given night. Maintained customer satisfaction. Had good customer hospitality and worked with a team to achieve the same goal. I learned a lot about a working system and teamwork from this job.
- Accomplishments: Gaining knowledge of how to work and act in a professional manner/setting. Learning how to work in a stressful/fast-paced environment. Lastly, dealing with making mistakes and having to lean on colleagues for help during shifts.

### Research Assistant

New Mexico State University, Las Cruces, NM (April 2024, August 2024)

- Developed Front-End applications on a network system that provides easier ways of cattle ranching. These things include creating visualization tools for water level sensors and rain gauge systems.
- Accomplishments: Learned software development skills and gained a good understanding of python using the Django framework. Gained good work experience and developed leadership skills. Got to look at what a complete full-stack network system looks like and what project management looks like.

## Projects

---

- **Compiler:** A basic compiler program that uses similar syntax to the C language. Built with a lexical analyzer, an abstract syntax tree, and finally an emit file that creates assembly code based on the structure of the abstract syntax tree. My compiler tackles both type and function checking. The compiler also provides numerous statements that work in the program (read and write) just to name some basic ones.
- **Recipe Generator:** Built a Recipe Generating Application fully in Java. I worked with a handful of people on building a database using MySQL. Using Technologies like Java Swing and JDBC to create a functional application that parses query results for as many as 600,000 tuples of recipes. Also integrated an OpenAI API key to generate images for recipe images.

## Extracurricular

---

- **Google Developers Club:** Work to gain programming skills. Contribute to a bi-annual coding competition.
